

correspondence the observed state of the water
of sand ten feet under ally reaching into further distance
the distance of thirty four feet five and one half inches
under from the back end of sand which is not
in front or sand. After two feet and extending in depth
downward of that water level but four and one half
inches. The water level is not the same as in the
the twenty second day of October 1882 and recorded in
West Book L D 15 p 22. The water level was conveyed into
also into the sand. The water level of the water level
its surface that surface with the surface of the water
to show the true and surface should not be taken over
but have some state open forever to be used by them
exclusively as a passage way and water level forever
that the water level of the water level should not open
water level on the eastern wall of any state so as to make
the water level of the water level of the water level
but the water level of the water level to have the right to make the
water level in any state as the water level upon the water level
allowing water to flow on the state of ground which is to
be left open and the water level of the water level to have the right
of putting hangings for pots in the walls on either side of
sand ally open forever as observed. The water level
is truly intended to make. The water level of the water level
and water level and sand ten feet under ally respectively.
