

Q U A R T O. M.

of microscopes in general ; together with full directions how to prepare, apply and examine, as well as preserve all sorts of minute objects : also an account of the principal microscopical discoveries that have hitherto been mentioned by the most celebrated authors, together with a great variety of new experiments and observations ; the whole being, as it were, a natural history of a multitude of aerial, terrestrial, and aquatic animals, seeds, plants, &c. By *George Adams*. London, 1746. (*The gift of the Honourable Thomas Penn, Esq;* with a compleat electrical apparatus.)

#87 *Molloy's (Charles) Treatise of Maritime Affairs, &c.* See *Jura*.
